sequence and an oligonucleotide comprising a sequence complementary to a polynacheotide which comprises a 3'-and sequence, where the comprises at 1 loast 15 nucleotides and the Compination of the 5'-and sequence/3'-and sequence is selected from these defined in the specification. The primer sets can be used in unfishment charapy and in desc therapy. The primer sets can be used in unfishment charapy and for the primers are useful for synthesising polynucleatides, particularly full-length CDNAs. The primers are also useful for the clark in and/or diagnosis of the abnormality of the factorical secrecied by the full-length cDNAs. The primers also wold align to the clark of the control of the clark in any specialised methods. AAHO1445 to AAH13428 and AAH3439 represent human clark sequences: AAH014429 to AAH13429 represent caligonucleotides, all of which are used in the examplification

The present invention describes primer sets for synthesising 5602 tuli-length cDNAs detrined in the specification. Where a primer set comprises: (a) an object? Primer and an objeoucleocide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 cucleotide comprises at least. Is nucleotides; or (b) 4 combination of an objeoucleotide comprises a sequence complementary to the comprise of a sequence complementary to the comprise of a polynucleotide which comprises a 5'-end sequence and an objeoucleotide comprises a sequence complementary to the comprises an objeoucleotide comprises and sequence complementary to a polynucleotide which comprises all-east 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in quene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the private of the full-length cDNAs. The primers are also useful for the connection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the cDNA easily without any specialised methods. AAH13629 to AAH13629 to AAH13632 represent thuman amino acid sequences; and AAH13632 to AAH13632 represent configences and an anioa acid sequences; and AAH13632 to AAH13632.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1015

the present invention provides the protein and coding sequences of 973 human testicular autiques, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, respiratory, neurological and gastrointestinal disorders, intections, and particularly cancer, especially testicular cancers. The present sequence is a DNA checking a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (tirst entry)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23-JAN 2002                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ĉ The invection relates to novel genes (ABA11004-ABA21534, and proteins (ABB14678-ABB18001) useful for preventing, treating or amelicating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis. Treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, tone, bone marrow. breast, qustrointestinal tract. liver, lung, or urbleantial; (b) immune disolders and other cancers of the adrenal gland, tone, bone marrow. Breast, autoimmune thyroiditis, diabetes mellings, Croim's disease, multiple sclerosis, rheumatoid arthritis and nicerative collisis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and englieby; and (f) miectious diseases such as viral, bacterial, trugai 280 / GCTAGCCAATGAAAATGTGATTAATGGACTTATCAGGCTAAGACT---GCCTTAAGCTG 2747 Nucleic acids encoding 324 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system (71 791 2863 AMGTCAAGGAAGGTTGAGGATGTITTACCAATTATTTTAAAGTCTAAAGTGAGAAAGGG 2804 435 TOSCETORACIO CAGASTITICAGACCAGCCAGGATAACATGGCAAAACCCTGTCTCTACA 494 375 GGCCGGCCACAATGGCTAATGCTCTAATCCAGCACTTTGGGAGGCTGAGGCAGAGA 434 printed specification, but was obtained in electronic formal directly from WIPO at 11p.wipo.int/pub/published\_pct\_sequences. Nucleic acids encoding 3224 haman nervous system antiger polypoptides, useful for preventing, diagnosina and/or freating nervous system cancers and metastases.

Disclosure, SEO ID NO 9032, 1701pp · Sequence tusting. English.

Isolated from a range of fundant issues discissed in the specification. The anclete acids, proteins, antibodies and (antibacensis are used). In the diagnosis, treatment and prevention etc. (a) cancers e.g. breast and ovarian cancer and other cancers of the adread alrad, tank, then the marrow, breast, gastrointestinal fract, liver, ind. or moranital, (b) immure disorders e.g. Addison's discuss, allerates medicities, rethermalisments anatomical. The invention relates to movel genes (ABALL) 4 ABALLS4, and proteins (ABAL4678-ABB18001) useful for preventing, treating or americal medical conditions e.g. by protein or gene therapy. The genes are disease, muitiple sclerosis, rheumate, Jarthritis and unequalize

The invention relates to detecting (MI) frame cast (MI) attributed (GMA), by setering the level of ceases as there as (MI) attributed (GMA), by setering the level of ceases as there as (MI) attributed (MI) at a cast (MI) at the expression level to an expression of MI) at the cease (MI) attributed (MII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        From Gs in the tissue. MI is nsetul for each tind own, with a need to made and the manner in made at many in an intermediating GAT MA is useful for streeting as about our tile in a second detecting an intimumation (expecting an intimum in second).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Netering granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves us diagnostic markers that is useful for modificating disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               viral intections parasitic intections protozoal intertions, tungal infections services things in inametroy diseases psecuralists frommatoid arthinists as quomerulorephritiss, asthmas thininases cardiac repertusion injury; renal reperfusion injury; A408: adult respiratory distress systements on the namentary boxes.                                                                                                                                                                                                                                                                                                                                                 parasitic infection, protozoal infection, fungal infection and MS is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part for the printed specification, but was obtained in electronic format directly from MFPO at.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś sedical conditions e.g. by protein or gene therapy. The generalical soluted from a range of human tissues discipaced in the specification, antibodies and (ant)agonists are issuid in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adread sland, bone, bone marrow, breast, dastrointestinal tract, liver, hum, or momental:
(b) immune disorders e.g. Addison's disease, alterates metits. Croin's disease, multiple sclerosis, rhemmator after a utoimmune thyroidiis, diabetes metits. Croin's disease, multiple sclerosis, rhemmatoria after a section of a cardiovascular disorders seed a section (d) wound healthap (e) neurological disvasce e.g. evertes a mycratical discipantials) (s) equipassy and (1) infectious diseases such as viral, british, immal
                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not four part of the principal principal specification, but was obtained in electronic force directly from Wife at ttp.wipo.int/pub/published_pet_sequences.
                                                                                                                                                                                                                                                                                                                                                                           and parasitic intections.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                 US-09-846-456-1
